IN THE CLAIMS

 (AMENDED) A composition of claim 5 wherein the coupling agent is vinyltriethoxysilane (VTES), [or] vinyltrimethoxysilane, or methacrylpropyltrimethoxysilane.

9. (AMENDED) A composition of claim 8 wherein the curing agent is a diacylperoxide, ketone peroxide, [and] <u>or</u> dialkyl peroxide.

11. (AMENDED) A [process] <u>composition</u> of claim 5 wherein the processing fluid is a methyl or hydroxy terminated polydimethyl siloxane.

REMARKS

The specification is objected to because of informalities. The specification has been amended to delete the brackets that were inadvertently left in the specification. In addition, the sentences have been modified slightly by removing the parentheses around the viscosity ranges to make them read more clearly. The mole % of dimethylsiloxane has been corrected from 99.02 mole % to read 99.92 mole %, so that the sum of the two components now adds to 100%. The word "parts" was added after "0.88"; all of the units in the examples are in parts. This is a correction of obvious inadvertent typographical errors.

Claims 7, 9 and 11 were amended to correct obvious inadvertent typographical errors.

For the reasons discussed above, applicants respectfully submit that the specification as amended overcomes the objections, therefore applicants request that the Examiner reconsider and withdraw the objections of the specification.
